

Application No. 10/037,284  
Reply to Office Action of October 25, 2005

**AMENDMENTS TO THE CLAIMS**

This listing of claims will replace all prior versions, and listings, of claims in the application.

1-37. (Canceled)

38. (Currently Amended) A method, comprising:

(a) receiving, from a user, a first voice command for a proposed macroinstruction, the proposed macroinstruction having a respective set of embedded processor executable instructions, at least a subset of the embedded executable instructions being a nonmacroinstruction and having a corresponding second voice command, the first voice command being the same as the second voice command;

(b) creating a macroinstruction as requested by the user, the created macroinstruction being invoked by the first voice command and comprising the subset of embedded executable instructions;

(c) receiving, from a user, at least a first spoken voice command;

[[ (b ) ] ] (d) determining whether the at least a first voice spoken voice command corresponds to a macroinstruction having a respective set of embedded processor executable instructions;

[[ ( c ) ] ] (e) when the at least a first spoken voice command corresponds to a macroinstruction, executing the respective set of embedded executable instructions, the respective set of instructions corresponding to a plurality of further voice commands;

[[ ( d ) ] ] (f) when the at least a first spoken voice command does not correspond to a macroinstruction, thereafter determining whether the at least a first spoken voice command corresponds to a nonmacroinstruction; and

[[ ( e ) ] ] (g) when the at least a first spoken voice command corresponds to a nonmacroinstruction, executing the corresponding nonmacroinstruction, wherein the corresponding nonmacroinstruction has a respective subset of processor executable instructions

*Application No. 10/037,284*  
*Reply to Office Action of October 25, 2005*

and wherein the first spoken voice command can ~~correspond~~refer both to ~~[[the]]a~~  
macroinstruction and at least one of the further voice commands a nonmacroinstruction.

39. (Currently Amended) The method of claim 38, wherein the nonmacroinstruction does not correspond to a plurality of embedded instructions, each having a corresponding further voice commands~~command~~, and further comprising after step ~~[[b]]~~(d):

~~[[f]]~~(h) determining if the ~~at least a first spoken~~ voice command corresponds to at least one of creating a macroinstruction, editing a macroinstruction, and deleting a macroinstruction;

~~[[g]]~~(i) when the ~~at least a first spoken~~ voice command corresponds to the at least one of creating a macroinstruction, editing a macroinstruction, and deleting a macroinstruction, executing the at least one of creating a macroinstruction, editing a macroinstruction, and deleting a macroinstruction.

40. (Currently Amended) The method of claim 39, wherein the at least one of creating a macroinstruction, editing a macroinstruction, and deleting a macroinstruction is creating a macroinstruction and further comprising the substeps:

requesting the user to pronounce a name for the new macroinstruction to be created; and  
receiving from the user the pronounced name for the new macroinstruction and the set of voice commands and associated instructions to be included with the macroinstructions associated set of instructions.

41. (Previously Presented) The method of claim 39, wherein the at least one of creating a macroinstruction, editing a macroinstruction, and deleting a macroinstruction is editing a macroinstruction and further comprising the substeps:

requesting the user to pronounce a name for the existing macroinstruction to be edited;  
when the pronounced name is received, retrieving the set of instructions corresponding to the macroinstruction to be edited;  
providing audibly the voice commands associated with each instruction in the set of instructions; and

*Application No. 10/037,284*  
*Reply to Office Action of October 25, 2005*

deleting user selected voice commands and associated instructions from and/or adding user selected voice commands and associated instructions to the received set of instructions.

42. (Previously Presented) The method of claim 39, wherein the at least one of creating a macroinstruction, editing a macroinstruction, and deleting a macroinstruction is deleting a macroinstruction and further comprising the substeps:  
requesting the user to pronounce a name for the existing macroinstruction to be deleted;  
when the name is received, deleting the macroinstruction.

43. (Currently Amended) The method of claim 39, wherein steps ~~[[f]]~~[[h]] and ~~[[g]]~~[[i]] precede step ~~[[c]]~~[[e]].

44. (Currently Amended) The method of claim 38, wherein the ~~at least a first~~first spoken voice command corresponds to a first macroinstruction and wherein a second macroinstruction is related to the first macroinstruction, whereby to invoke the second macroinstruction the first voice command must be spoken.

45. (Currently Amended) The method of claim 38, wherein a first macroinstruction corresponds to the ~~at least a first~~first spoken voice command and wherein the first macroinstruction is edited through a graphical user interface.

46. (Currently Amended) The method of claim 38, further comprising:  
a user creating a second macroinstruction through a graphical user interface and  
the user recording a ~~second~~third voice command to invoke the second macroinstruction.

47. (Previously Presented) The method of claim 40, wherein the order in which each voice command in the set of voice commands is temporally received from the user is the order in which the instructions corresponding to the voice commands are executed when the new

Application No. 10/037,284  
Reply to Office Action of October 25, 2005

macroinstruction is invoked by the user and wherein the instructions are executed without regard to a timing between receipt of the corresponding voice commands from the user.

48. (Currently Amended) The method of claim 40, wherein each of the voice commands in the set of voice commands is received orally from the user and wherein, in step ~~[[c)]~~(e), each instruction in the respective set of instructions ~~being~~is executed at least one of substantially simultaneously and simultaneously.

49. (Canceled)

50 (Canceled)

51. (Currently Amended) A telecommunications system, comprising:  
a switching system operable to configure and effect desired connections;  
a voice recognition module operable to identify voice commands and macroinstruction names spoken by a user, the voice commands being nonmacroinstructions;  
a macrolibrary operable to store macroinstructions and associated macroinstruction names;  
a voice agent operable to:  
(a) receive, from a user, a first voice command for a proposed macroinstruction, the proposed macroinstruction having a set of embedded processor executable instructions, at least a subset of the embedded executable instructions being a nonmacroinstruction and having a corresponding second voice command, the first voice command being the same as the second voice command;  
(b) create a macroinstruction as requested by the user, the created macroinstruction being invoked by the first voice command and comprising the subset of embedded executable instructions;  
(c) ~~receive identified voice commands and macroinstruction names from the voice~~  
recognition module[,,];

Application No. 10/037,284

Reply to Office Action of October 25, 2005

[[~~(b)~~]](d) associate the identified voice command and macroinstruction name with the one or more a corresponding ~~[[sets]]~~ set of executable instructions[[.]]; ~~the one or more~~

~~(c) when an identified macroinstruction name is received, cause the performance of at least one work item associated with the one or more instructions corresponding to the identified macroinstruction, wherein a set of instructions corresponding to a macroinstruction comprises a set of embedded voice commands, the set of voice commands having a plurality of voice commands and, for each voice command, a respective set of instructions and wherein, when an identified macroinstruction name is received, each instructions in the respective set of instructions is executed at least one of substantially simultaneously and simultaneously;~~

[[~~(d)~~]](e) receive at least a first spoken voice command;

[[~~(e)~~]](f) first determine whether the at least a first spoken voice command corresponds to a macroinstruction having a respective set of nonmacroinstructions; ~~the set of instructions corresponding to a single voice command;~~

[[~~(f)~~]](g) when the at least a first spoken voice command corresponds to a macroinstruction, execute the respective set of nonmacroinstructions; ~~the respective set of instructions corresponding to a plurality of further voice commands;~~

[[~~(g)~~]](h) when the at least a first spoken voice command does not correspond to a macroinstruction, second determine whether the at least a first spoken voice command corresponds to a nonmacroinstruction; and

[[~~(h)~~]](i) when the at least a first spoken voice command corresponds to a nonmacroinstruction, execute the nonmacroinstruction, wherein the first voice command can correspond to both the macroinstruction and at least one of the further voice commands.

52. (Canceled)

53. (Currently Amended) The telecommunication system of claim 51, wherein the voice agent is further operable to determine if the at least a first spoken voice command corresponds to at least one of creating a macroinstruction, editing a macroinstruction, and deleting a macroinstruction; and, when the at least a first spoken voice command corresponds to

*Application No. 10/037,284*

*Reply to Office Action of October 25, 2005*

the at least one of creating a macroinstruction, editing a macroinstruction, and deleting a macroinstruction, execute the at least one of creating a macroinstruction, editing a macroinstruction, and deleting a macroinstruction.

54. (Previously Presented) The telecommunication system of claim 53, wherein the at least one of creating a macroinstruction, editing a macroinstruction, and deleting a macroinstruction is creating a macroinstruction and the voice agent is further operable to request the user to pronounce a name for the new macroinstruction to be created and receive from the user the pronounced name for the new macroinstruction and the set of voice commands and associated instructions to be included with the macroinstructions associated set of instructions.

55. (Previously Presented) The telecommunication system of claim 53, wherein the at least one of creating a macroinstruction, editing a macroinstruction, and deleting a macroinstruction is editing a macroinstruction and wherein the voice agent is further operable to request the user to pronounce a name for the existing macroinstruction to be edited; when the pronounced name is received, retrieving the set of instructions corresponding to the macroinstruction to be edited; provide audibly the voice commands associated with each instruction in the set of instructions; and delete user selected voice commands and associated instructions from and/or adding user selected voice commands and associated instructions to the received set of instructions.

56. (Previously Presented) The telecommunication system of claim 53, wherein the at least one of creating a macroinstruction, editing a macroinstruction, and deleting a macroinstruction is deleting a macroinstruction and the voice agent is further operable to request the user to pronounce a name for the existing macroinstruction to be deleted and, when the name is received, deleting the macroinstruction.

57. (Previously Presented) The telecommunication system of claim 53, wherein the at least a first voice command corresponds to a first macroinstruction and wherein a second

*Application No. 10/037,284*  
*Reply to Office Action of October 25, 2005*

macroinstruction is related to the first macroinstruction, whereby to invoke the second macroinstruction the first voice command must be spoken.

58. (Currently Amended) The telecommunication system of claim 52, wherein a first macroinstruction corresponds to the at least a first spoken voice command and wherein the first macroinstruction is edited through a graphical user interface.

59. (Previously Presented) The telecommunication system of claim 52, wherein the voice agent is further operable to allow a user to create a second macroinstruction through a graphical user interface and record a second voice command to invoke the second macroinstruction.

60. (Previously Presented) The telecommunication system of claim 54, wherein the order in which each voice command in the set of voice commands is temporally received from the user is the order in which the instructions corresponding to the voice commands are executed when the new macroinstruction is invoked by the user and wherein the instructions are executed without regard to a timing between receipt of the corresponding voice commands from the user.

61. (Previously Presented) The telecommunication system of claim 51, wherein each of the voice commands in the set of voice commands is received orally from the user.

62. (Currently Amended) A telecommunication system, comprising:  
a voice agent operable to:

(a) receive, from a user, at least a first voice command for a proposed macroinstruction, the proposed macroinstruction having a set of embedded processor executable instructions, at least a subset of the embedded executable instructions being a nonmacroinstruction and having a corresponding at least a second voice command, the at least a first voice command being the same as the at least a second voice command;

Application No. 10/037,284  
 Reply to Office Action of October 25, 2005

(b) create a macroinstruction as requested by the user, the created macroinstruction being invoked by the at least a first voice command and comprising the subset of embedded executable instructions;

(c) receive at least at least a third first-voice command;

[[ (b ) ] ] (d) first determine whether the at least a first third voice command corresponds to a macroinstruction having a respective set of embedded executable nonmacroinstructions, each nonmacroinstruction having a corresponding voice command;

[[ (c ) ] ] (e) when the at least a first third voice command corresponds to a macroinstruction, execute the respective set of nonmacroinstructions, the respective set of instructions corresponding to a plurality of further voice commands;

[[ (d ) ] ] (f) when the at least a first third voice command does not correspond to a macroinstruction, second determine whether the at least a first third voice command corresponds to a nonmacroinstruction, the nonmacroinstruction having a respective set of executable instructions and corresponds to one voice command; and

[[ (e ) ] ] (g) when the at least a first third voice command corresponds to a nonmacroinstruction, execute the nonmacroinstruction, wherein the first a selected voice command can correspond refer both to [ the ] a macroinstruction and at least one of the further voice commands a nonmacroinstruction.

63. (Currently Amended) The telecommunication system of claim 62, wherein the voice agent is further operable, after operation step [[ (b ) ] ] (d), to:

[[ (f ) ] ] (h) determine if the at least a first third voice command corresponds to at least one of creating a macroinstruction, editing a macroinstruction, and deleting a macroinstruction; and

[[ (g ) ] ] (i) when the at least a first third voice command corresponds to the at least one of creating a macroinstruction, editing a macroinstruction, and deleting a macroinstruction, execute the at least one of creating a macroinstruction, editing a macroinstruction, and deleting a macroinstruction.

*Application No. 10/037,284*

*Reply to Office Action of October 25, 2005*

64. (Currently Amended) The telecommunication system of claim 63, wherein the at least one of creating a macroinstruction, editing a macroinstruction, and deleting a macroinstruction is creating a macroinstruction and wherein the voice agent is operable to perform the suboperations of:

requesting the user to pronounce a name for the new macroinstruction to be created; and

receiving from the user the pronounced name for the new macroinstruction and the set of voice commands and associated instructions to be included with the macroinstructions associated set of instructions.

65. (Currently Amended) The telecommunication system of claim 63, wherein the at least one of creating a macroinstruction, editing a macroinstruction, and deleting a macroinstruction is editing a macroinstruction and wherein the voice agent is operable to:

perform the suboperations of requesting the user to pronounce a name for the existing macroinstruction to be edited;

when the pronounced name is received, retrieving the set of instructions corresponding to the macroinstruction to be edited;

providing audibly the voice commands associated with each instruction in the set of instructions; and

deleting user selected voice commands and associated instructions from and/or adding user selected voice commands and associated instructions to the received set of instructions.

66. (Currently Amended) The telecommunication system of claim 63, wherein the at least one of creating a macroinstruction, editing a macroinstruction, and deleting a macroinstruction is deleting a macroinstruction and wherein the voice agent is operable to:

perform the suboperations of requesting the user to pronounce a name for the existing macroinstruction to be deleted; and, when the name is received, deleting the macroinstruction.

67. (Currently Amended) The telecommunication system of claim 63, wherein operations [(f)](h) and [(g)](i) precede operation [(c)](e).

*Application No. 10/037,284*  
*Reply to Office Action of October 25, 2005*

68. (Currently Amended) The telecommunication system of claim 62, wherein the at least a firstthird voice command corresponds to a first macroinstruction and wherein a second macroinstruction is related to the first macroinstruction, whereby to invoke the second macroinstruction the first voice command must be spoken.

69. (Currently Amended) The telecommunication system of claim 62, wherein a first macroinstruction corresponds to the at least a firstthird voice command and wherein the first macroinstruction is edited through a graphical user interface.

70. (Currently Amended) The telecommunication system of claim 62, and wherein the voice agent is further operable to allow a user to create a second macroinstruction through a graphical user interface and record a secondfourth voice command to invoke the second macroinstruction.

71. (Currently Amended) The telecommunication system of claim 64, wherein the order in which each voice command in the set of voice commands is temporally received from the user is the order in which the nonmacroinstructions corresponding to the voice commands are executed when the new macroinstruction is invoked by the user and wherein the nonmacroinstructions are executed without regard to a timing between receipt of the corresponding voice commands from the user.

72. (Previously Presented) The telecommunication system of claim 64, wherein each of the voice commands in the set of voice commands corresponding to a macroinstruction is received orally from the user and wherein, when the macroinstruction is invoked by a user, the voice commands in the set of voice commands are executed simultaneously or substantially simultaneously.

73. (Previously Presented) The telecommunication system of claim 62, further comprising:

*Application No. 10/037,284*

*Reply to Office Action of October 25, 2005*

a switching system operable to configure and effect desired connections;  
a voice messaging system operable to receive, store and deliver voice messages;  
a voice recognition module operable to identify voice commands and macroinstruction names spoken by a user; and  
a macrolibrary operable to store macroinstructions and associated macroinstruction names.

74. (Currently Amended) The telecommunication system of claim 73, wherein the at least a firstthird voice command corresponds to a macroinstruction name and the set of nonmacroinstructions associated with the macroinstruction name relates to retrieval of voice messages.

75. (Currently Amended) The method of claim 38, wherein a first macroinstruction and a firstsecond nonmacroinstruction are invoked by pronouncing the same set of words.

76. (Currently Amended) The telecommunication system of claim 51, wherein a first macroinstruction and a firstsecond nonmacroinstruction are invoked by pronouncing the same name.

77. (Currently Amended) The telecommunication system of claim 62, wherein a first macroinstruction and a firstsecond nonmacroinstruction have the same name.
